

Bamboo Charcoal (Takesumi)

TAKESUMI Mysterious Bamboo Charcoal

“*Takesumi*” is the Japanese word for bamboo charcoal (Take=bamboo, Sumi=charcoal). It is a charcoal but not just a fuel. Takesumi has been used in Japan and has become prominent recently for its magic power. It is very versatile. Here are the mysterious powers of Takesumi, bamboo charcoal.

1. What is Bamboo Charcoal

We normally do not use bamboo charcoal as a fuel, like for BBQ. Bamboo charcoal is used more for health or ecology purpose. Bamboo is a special plant different from other trees. It grows one metre per night when it is young. The skin of bamboo shoots have been used in Japan for wrapping food to make it last longer. These properties may work when it becomes charcoal.

Bamboo Charcoal makes food last longer.

2. Purifying, Deodorant, and Dehumidification

Takesumi has a similar function to wood charcoal but its power is much stronger. Takesumi has 10 times more

Making water tasty and safe.

porous on it than wooden charcoal. When you put some pieces in drinking water, the charcoal takes the chemical residue from the water and releases its rich minerals into the water. It makes the water taste far better.

Takesumi also has a deodorant function like activated carbon. If you put it in a refrigerator, it will reduce the smell. We had an experimental outdoor toilet with just Takesumi powder. It does not have any flushing function and it does not smell at all.

Takesumi has a dehumidification effect as well. If you lay Takesumi powder in the store room, it will reduce the humidity as well as the smell. In Japan, it has been popular to lay Takesumi (or wooden charcoal) underneath the floors of houses. It reduces the humidity in the house. It reduces the damage from insect attack. It also has healing power with its energy field of negative ions.

3. Agricultural and Pastoral Use

Takesumi has been used a lot for agriculture and raising stock in Japan. If you apply Takesumi or Takesumi powder in the soil, it will increase the numbers and activity of micro-organisms. Because Takesumi is porous, it attracts micro-organisms. (1g piece of bamboo charcoal has the same surface as one tennis court.)

“Take-Su” is a bamboo charcoal vinegar. It is produced during the process of making charcoal by cooling the smoke. It is acidic and has a miracle power in various areas. It revives the power of plant life, of animals and of course of humans, too. If you apply Takesu on your plants, it will strengthen them. If you give it to animals, they will become healthier. If you get sick, you can even drink Takesu and it will recover your health. Takesu also has a repressive effect on insects, so you can use it as an organic insecticide for your vegetable garden.

There are many farmers in Japan who feed charcoal to their livestock. It strengthens the health of the animals and also enhances the taste of their meat. You can easily test it by not mixing Takesumi in the feed but giving it instead separately. If their health condition needs charcoal, they will eat it. Of course, Takesumi is good for your pet, too.

“Takesu” or Bamboo Charcoal Vinegar

4. Health Recovery and Healing

This is the biggest power of Takesumi which has been making Takesumi popular in Japan. Takesumi releases negative ions into the air and it will make you feel good. Takesumi also has a very strong energy field which causes many mysterious effects. It may have a good vibration for lives. It is said that Takesumi has a power to set everything in a good balance. It is Takesumi’s function to get everything back to the most well-balanced position. This is why there is no harm.

If you get sick, you can take Takesumi or Takesu to recover your health. It enhances your healing power. There have been many reports that even very bad cancer has been remedied.

One of the professional soccer teams in Japan, “Jubiro Iwata” is using Takesumi a lot. They laid Takesumi under the soccer ground. This is of course good for the lawn but

Bamboo charcoal can reduce the chemical content in wine, such as sulphur, etc.

it also gives a good feeling to the players. They use Takesumi and Takesu when the players get injured. One of the famous players once broke a bone. He applied Takesumi on his injury and had an incredibly quick recovery.

Takesumi is conducted when it is produced with high temperature over 1000 degrees C resulting in many miraculous functions possibly of magnetic power. It may be explained in the future using the theory of Photon or Graviton. However, it actually has many more mysterious powers than the functions explained scientifically.

Takesumi Pendant

Bamboo charcoal is easily cut with a saw, formed with a file and polished with sandpaper. If you polish the surface of the charcoal, it’ll make it shiny, good for a pendant. If you put the Takesumi pendant on your chest, you will feel better. Between your nipples, there is the thymus gland which controls your immunity system. Takesumi works on it and enhances the healing power. This place in the body is also known as the 4th Chakra in humans. Takesumi gives special energy to it.

In our garden house, there is lots of charcoal laid underneath the floor which gives good healing energy.

Shikitan

Shikitan has become popular in Japan. In new building houses or old houses, Takesumi and/or Takesumi powder is laid underneath the floors of a house. Wooden charcoal also can be used for Shikitan which has lots of merits.

- Giving a healing field to the house
Good sleeping, comfortable living, etc.
- Dehumidifying the house
Avoiding fungus, damaging of the house, etc.
- Giving a preventive in case of insect invasion.
Termites are a serious problem in Japan as there are many wooden houses.

The application of Takesumi is designed according to the plan of the house by a special method similar to “Feng Shui”.

Instead of Shikitan, you can put some charcoal at the four corners of any spaces. It can make an energy field there. Some Japanese farmers burry charcoal at the four corners of their vege gardens where they find the vegetables grow in a healthy condition.

There are two sizes of charcoal sticks. The thin stick is good for drink bottles or wine bottles. The other one is for general purpose. We also have off-cut pieces which are cheaper than the sticks. You can use it for gardening, animals, etc. Please look at our website for detail.

Charcoal is beautiful.

We use charcoal vinegar in a spray bottle as in this photo. One is original liquid, one is diluted with water 5 times and one is diluted 10 times. You can use the original one for drinking (spray in your mouth) or spraying onto an insect bite or to cut skin. To spray in your eyes, use 10 time dilution.

Bamboo charcoal (or wooden charcoal) is known as a home remedy for detoxing. When you get food poison or insect bite, it will work. It may be a good idea to take charcoal for your trip. Here are books written by Dr.Thraus introducing charcoal as a home remedy.

When you have a wasp sting, make paste mixing charcoal powder and charcoal vinegar. Apply it where you got stung. It is also good to take charcoal powder and vinegar at the same time.

The long chimney is for taking charcoal vinegar from the smoke.

You can enjoy making charcoal from anything you like.
